

Hello,

Thanks for ordering this amazing yet simple device. I call it a "pattern interrupt" for changing the mental & physical do loop we all get in. For example, when we have an allergy or an allergic reaction we can introduce the laser light frequency of 650 Hz (the laser is 650 Nanometers) - a healthy cell vibrates at 650 Hz ... when we are sick, diseased, out of flow, depressed - we have a pattern or program in the body/mind vibrating at a much lower frequency. When we introduce the 650Hz in the ear (Auricular-therapy -acupuncture of the ear), we send light through all the meridians in the body razing the lower frequencies up to match the laser. It's like a ball rolling down hill and automatically goes to the area of deficiency. You can't do too much nor do it wrong:-)

I recommend using the laser in the ear (painting the front mostly and then the back of each ear) for several minutes while stating the issue in your mind - ex: "...this allergic reaction... this allergic reaction...etc. I sometimes do this while driving for 5 -10 min. - just after I think I've come in contact with the allergen. Doing this repeatedly will help you to NOT have the reaction. And as you do this several times, maybe twice a day, you will find that you may not need the laser. You may want to start up again just to "set" the frequency.

Also, I have had several therapists report success with people in pain. Using the laser on the body where disharmony is felt also helps with raising the frequency in that area, thus creating harmony.

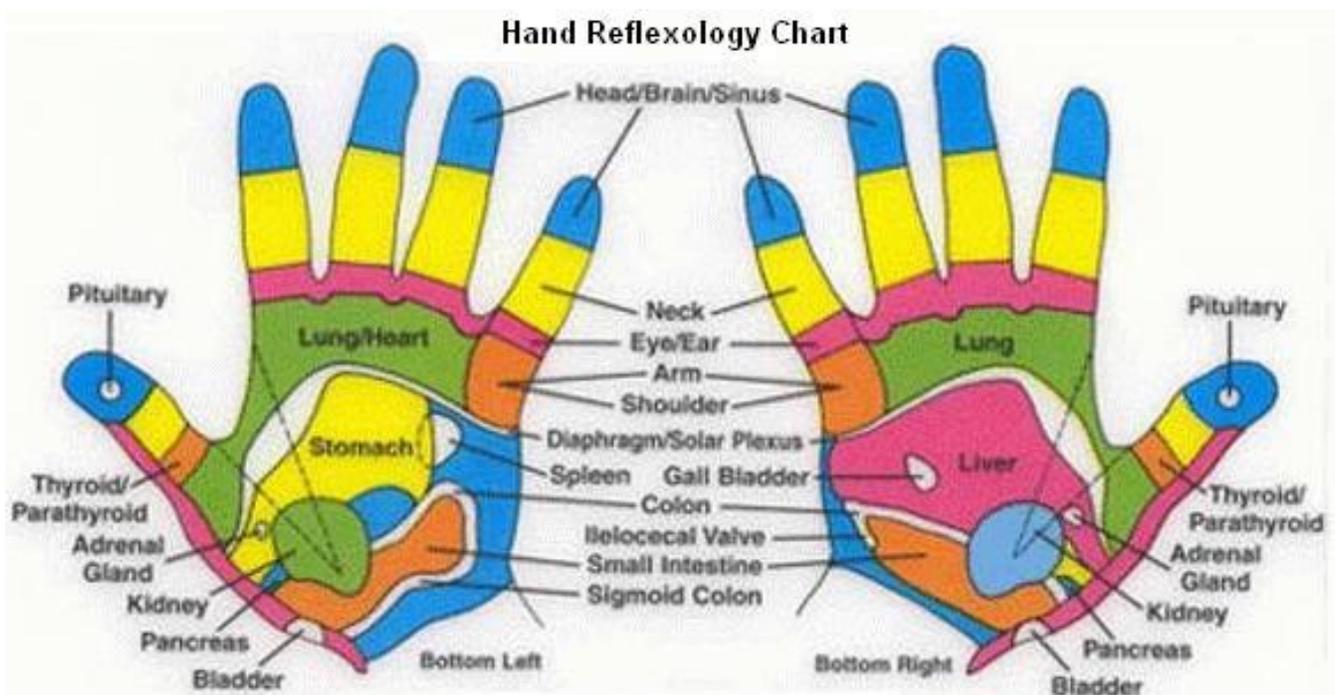

Please see the attached files for reference. BUT, the best place to learn is at [www.allergyantidotes.com](http://www.allergyantidotes.com) and go to the right for "Free Download" - Sandi will show you how!

All the best in health and happiness,  
Bob

PS. Please feel free to call me for further assistance - Rhode Island 401-207-6008

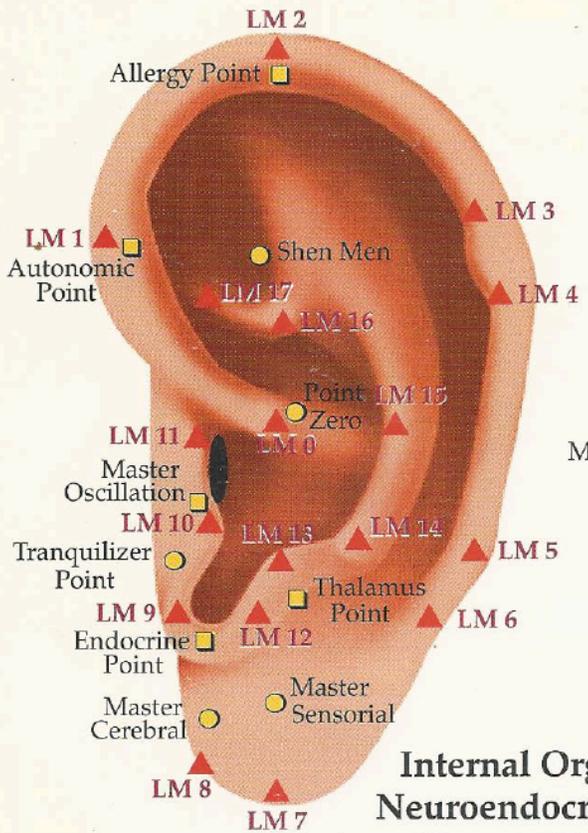

## Cold or Low Level Laser Therapy Device

This powerful **Laser Therapy Device** operates at 650 nm (nano meters) with a very unique feature of *100 points of light* for a more powerful flow and vibrational coverage. It has almost no heat and is known as a "cold laser therapy", or "low level laser therapy" (LLLT). The 650nm wavelength of this laser looks hot but is cool to the touch and is actually very soothing. A healthy cell vibrates at a range of 635Hz to 650Hz. This intense laser light acts as a tuning fork and helps to increase the vibration of the cells to a healthy level. This frequency of vibration travels the complete length of all meridian pathways and effects the whole body. It is powered by two AAA batteries and is a handy, sturdy travel companion.
